XR FireTrainer
by Agogy

THE FIRE SAFETY TRAINING REVOLUTION

The **XR FIRE TRAINER** kit allows Fire Safety Trainers to simulate fires in an actual environment.

- Gamified for more efficient and faster learning

- Unmatched hyperrealism of fire (sound, image, propagation, smoke)

- Realistic interaction with your customer's actual environment

- Portable set (flight case) enables on-site training at your clients' workplace

- Quantifiable cost savings (1 kit for all your training sessions)

- Total elimination of risks (burns, gas transport,...)

- Unique on the market. Be the first to adopt XR FIRE TRAINER technology

- Extended Reality (XR) Technology, interaction between real and virtual environments

XR FIRE TRAINER combines several advanced technologies to offer the only fire safety tool using Mixed Reality (XR). XR FIRE TRAINER offers a wider field of view than Augmented Reality, thanks to the combination of an HTC Vive Virtual Reality headset and a ZED Mini StereoLabs camera. **This mix of technologies, unique in the world, is developed in partnership with the leading French technology lab: CLARTE.**
